                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                   The invention relates to purified and isolated nucleotide sequences encoding mammalian Ca2+/calmodulin-stimulated phosphodiesterases (CaM-PORS) and cyclic guantidine monophosphate (CSM)-stimulated phosphodiesterases (CGS-PDES). In particular the invention relates to assay for identifying chemicals that modify the enzymatic activity of amammalian cGS-PDE. The PDES catalyse the hydrolysis of of cyclic nucleotides to their corresponding 5'-uncleoside monophosphates. In this way they control the callular concentration of cyclic nucleotides, thereby regulating the flow of information from extracellular hormones, thereby regulating the flow of information from extracellular hormones, control messengers. The PDEs in turn are regulated by transmembrane signals or second messenger ligands such as Ca2+ or cGMP. Inhibitors of these enzymes are potentially useful as cardiotonics, antidepressants, antidepressants, antidepressants, antidepressants, antidentify specific inhibitors of particular isoforms of CGS-PDES. PDE and cGS-PDE. The DNA sequence is useful for producing a polypeptide having the enzymatic activity of a mammalian CaM-PDE or cGS-PDE which is used in therapeutic, diagnostic and prognostic applications and in the preparation of antibodies. Isolated chemical agents which are inhibitors of PDEs may have anti-depressant, anti- hypertensive or anti-thrombotic activities or may be cardiotonic agents. The present sequence is a Bovine CaM-PDE or cGS-PDE (or fragment) of the invention
                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a mammalian Ca 2+/ calmodulin stimulated cyclic nucleotide phosphodiesterase (CaM-PDE) and cyclic-guanosine monophosphate (CGMP) stimulated cyclic nucleotide phosphodiesterase (CGS-PDE) polypeptide and its polymucleotide. The invention is useful for producing a polypeptide having enzymatic activity of mammalian CaM-PDE and cGS-PDE. The invention is also useful for identifying a chemical agent that modifies the enzymatic activity of mammalian CaM-PDE agent that modifies the enzymatic activity of mammalian CaM-PDE and CGS-PDE. The present sequence is bovine cGS-PDE protein, pBBCGSPDE-7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                              Ca 2+/ calmodulin stimulated cyclic nucleotide phosphodiesterase; cGMP; cyclic-guanosine monophosphate; cGS-PDE; cyclic-GMP stimulated cyclic nucleotide phosphodiesterase; bovine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel mammalian calcium/calmodulin stimulated cyclic phosphodiesterase nucleotide sequence useful for identifying chemical agent that modifies enzymatic activity of calcium/calmodulin stimulated cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MGQACGHSILCRSQQYPAARPAEPRGQQVFLKPDEPPPPPPPPPPCADSLQDALLSLGSVIDV

A bovine brain cDNA library in lambda ZAP was screened with a 450 bp BCORI/Apal fragment of p3CGS-5 cDNA corresp. to p3CGS-5 nucleotide position numbers 1-452. Forty putative clones were picked from this first screen, of which six were randomly selected and purified. Each of the clones was spotted onto a lawn of host XLI cells and screened with a 370 bp PstI/Smal fragment of p3CGS-5 cDNA. Six putative clones were obtd. and sequenced. Clone pBBCGSPDE-7 contains an insert contg. an ORF encoding a 942 residue protein that is nearly identical to the adrenal gland cGS-PDE isozyme. The difference in the primary structure of these two isozymes lies in the amino terminal residues 1-46 of the brain cGS PDE and residues 1-25 of the adrenal cGS PDE. The remaining carboxy-terminal residues of the brain and adrenal cGS PDE are identical. (Updated on 25-

AAR28408;

```
AAQ83978 encodes AAR69729 the human cyclic-GMP stimulated nucleotide phospho-diesterase (CaM PDB) clone HFB9.2. Eukaryotic cells that express CaM PDE can be used to screen cpds. for the ability to modulate CaM PDE activity. CaM PDBs are involved in regulating the transmission of information from hormones, neurotransmitters or other systems that use cyclic nucleotides as messengers. Antibodies raised against CaM PDE can be used for enzyme purifcn., or determination. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MGNRPMEMMDREKAYIPELQISFMEHIAMPIYKLLQDLFPKAAELYERVASNREHWTKVS 900

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the cyclic GMP stimulated phosphodiesterase (GGS -PDE) clone pHcgs6n isolated from human foetal brain. The cyclic nucleotide phosphodiesterases (PDEs) catalyse the hydrolysis of 3', 5' cyclic nucleotides, such as cAMP and cGMP, to their corresponding 5'- nucleotide monophosphates. The PDEs are therefore important in the control of the cellular concentration of cyclic nucleotides. The PDEs are, in turn, regulated by transmembrane signals or second messenger are, in turn, regulated by transmembrane signals or second messenger cole in regulating the flow of information from extracellular hormones, neurotransmitters, or other signals that use the cyclic nucleotides as messengers. PDEs are present in most of the cells and tissues of cherapeutic organisms, but only in trace amounts. cGS-PDEs are stimulated by cGMP in effecting cAMP hydrolysis. This is thought to occur through a concatalytic cGMP-specific site present on the cGS-PDE. The cDNA encoding this sequence can be used for the production of recombinant cGS-PDE, which may have therapeutic and diagnostic uses. This protein may also be useful for diagnostic antibody production. (Updated on 25-MAR-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DAYAHPLFYRGVDDSTGFRTRNILCFPIKNENQEVIGVAELVNKINGPWFSKFDEDLATA 540
                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents the human cyclic-GMP-stimulated phosphodiesterase (cGS-PDE) from pHcgs6n plasmid. The DNA sequences of the cGS-PDE's are used for the production of the recombinant enzymes, which in turn may be used for antibody production and to screen for compounds that modulate phosphodiesterase activity. The present sequence represents human cyclic guanosine monophosphatestimulated phosphodiesterase (CGS-PDE) CDNA. The specification also effectibes Ca2+/calmoduln sensitive cyclic nucleotide phosphodiesterase (Cam-PDE) enzymes. CaM-PDE enzymes catalyse the hydrolysis of cyclic nucleotides and as such control their intracellular level. They are controlled by second messengers e.g. Ca2+ and calmodulin and transmembrane signals and through pathways involving these, regulate flow of information from extracellular hormones, neurotransmitters and other signals using cyclic nucleotides as messengers. The specification describes an assay for identifying a chemical agent which modifies the enzymatic activity of a mammalian CaM-PDE. The assays are useful for identifying modulators of CaM-PDEs. The assays are useful for identifying explis expressing CaM-PDEs with the suspected modulator and messuring its effect e.g. monitoring the hydrolysis of cAMP and/or CGMP H flow 479 539 900 629 720 120 180 180 240 300 299 360 359 420 419 480 540 599 99 AGLQQAVKEALSAVLPKVETVYTYLLDGESRLVCEEPPHELPQEGKVREAVISRKRLGCN 120 9 9 1 MGQACGHSILCRSQQYPAARPAEPRGQQVFLKPDEPPPPQPCADSLQDALLSLGSVIDV SGLQRAVKBALSAVLPRVETVYTYLLDGESQLVCEDPPHELPQEGKVREAIISQKRLGCN GLGFSDLPGKPLARLVAPLAPDTQVLVMPLADKEAGAVAAVILVHCGQLSDNEEWSLQAV DASSLQLKVLQYLQQETRASRCCLLLVSEDNLQLSCKVIGDKVLGEEVSFPL-TGCLGQV VEDKKSIQLKDLTSEDVQQLQSMLGCELQAMLCVPVISRATDQVVALACAFNKLEGDLFT EARNLSNAEICSVFLLDQNELVAKVFDGGVVDDESYEIRIPADQIAGHVATTGQILNIP FSIYCGISIAHSLLYKKVNEAQYRSHLANEMMYHMKVSDDEYTKLLHDGIQPVAAIDSN FASFTYTPRSLPEDDTSMAILSMLQDMNFINNYKIDCPTLARFCLMVKKGYRDPPYHNWM HAFSVSHFCYLLYKNLELTNYLEDMEIFALFISCMCHDLDHRGTNNSFQVASKSVLAALY SSEGSVMERHHFAQAIAILNTHGCNIFDHFSRKDYQRMLDLMRDIILATDLAHHLRIFKD GLGPSDLPGKPLARLVAPLAPDTQVLVIPLVDKEAGAVAAVILVHCGQLSDNEBWSLQAV EKHTLVALKRVQALQQRESSVAPEATQNPPEEAAGDQKGGVAYTDQDRKILQLCGELYDL DASSLQLKVLQYLQQETQASRCCLLLVSEDNLQLSCKVIGDKVLBEEISFPLTTGRLGQV VEDKKSIQLKDLTSEDMQQLQSMLGCEVQAMLCVPVISRATDQVVALACAFNKLGGDLFT DQDEHVIQHCFHYTSTVLTSTLAFQKEQKLKCECQALLQVAKNLFTHLDDVSVLLQEIIT EARNLSNAEI CSVFLLDONELVAKVFDGGVVEDESYEIRI PADOGIAGHVATTGOILNIP DAYAHPLFYRGVDDSTGFRTRNILCFPIKNENQEVIGVAELVNKINGPWFSKFDEDLATA FSIYCGISIAHSLLYKKVNEAQYRSHLANEMMYHMKVSDDEYTKLLHDGIQPVAAIDSN FASFTYTPRSLPEDDTSMAILSMLODMNFINNYKIDCPTLARFCLMVKKGYRDPPYHNWM HAFSVSHFCYLLYKNLELTNYLEDIEIFALFISCMCHDLDHRGTNNSFQVASKSVLAALY SSEGSVMERHHFAQAIAILNTHGCNIFDHFSRKDYQRMLDLMRDILLATDLAHHLRIFKD Gaps 1; DB 2; Length 941; Indels 19; Query Match 96.3%; Score 4728.5; Best Local Similarity 96.0%; Pred. phosphodiesterase from the bovine brain. The phosphodiesterases isolated in this invention were used to transform host cells, preferably mammalian or yeast cells. The recombinant proteins and fragments produced can be used for therapeutic, diagnostic, and prognostic purposes and will provide the basis for preparation of monoclonal and polyclonal antibodies. An antibody specific for the Ca2+/calmodulin-stimulated cyclic nucleotide phosphodiesterase (PDE) polypeptide is useful for affinity purification or detection of the polypeptide and is selective only for the Ca2+/calmodulin stimulated cyclic nucleotide PDE polypeptide 839 899 AGLQQAVKEALSAVLPKVETVYTYLLDGESRLVCEEPPHELPQEGKVREAVISRKRLGCN 120 9 9 ò 840 MGNRPWEWDREKAYIPELQISFMEHIAMPIYKCLLQDLFPKAAELYERVASNREHWTKVS 780 LQKMAEVGYDRNNKQHHRLLLCLLMTSCDLSDQTKGWKTTRKIAELIYKEFPSQGDLEKA MGNRPMEMMDREKAYIPELQISFMEHIAMPIYKLLQDLFPKAAELYERVASNREHWTKVS LQKMAEVGYDRTNKQHHSLLLCLLMTSCDLSDQTKGWKTTRKIAELIYKEFFSQGDLEKA MGQACGHSILCRSQQYPAARPAEPRGQQVFLKPDEPPPPPPPQPCADSLQDALLSLGSVIDV Gape purification cyclic-GMP-stimulated phosphodiesterase clone pHcgs6n encodes 1, cow; Ca2+ stimulated phosphodiesterase;
